

ABSTRAK

Saputri, Ajeng Paramita. 2025. Hubungan peran kader posyandu dan dukungan keluarga terhadap kepatuhan ibu dalam pemberian imunisasi dasar lengkap di Puskesmas Nosarara Kota Palu

Imunisasi merupakan salah satu sarana menjamin kesehatan anak, dan kesehatan anak merupakan hak dasar anak yang tidak bisa dikurangi sehingga kepatuhan jadwal imunisasi menjadi faktor yang penting. Berdasarkan data di Puskesmas Nosarara Kota Palu, capaian imunisasi dasar pada bayi adalah salah satu yang terendah dengan capaian 78,9% pada tahun 2023. Tujuan penelitian ini untuk mengetahui hubungan antara peran kader posyandu dan dukungan keluarga terhadap kepatuhan ibu dalam pemberian imunisasi dasar lengkap. Jenis penelitian yang digunakan adalah deskriptif analitik dengan pendekatan Cross Sectional. Penelitian ini dilakukan di posyandu pada wilayah kerja Puskesmas Nosarara Kota Palu. Populasi dalam penelitian ini adalah Ibu dari balita yang diberikan imunisasi dasar lengkap. Sampel penelitian ini sebanyak 107 orang dan diambil secara proporsional random sampling. Data dianalisis secara univariat dan bivariat dengan uji Chi Square. Hasil penelitian menunjukkan bahwa 77,57% ibu patuh pada pemberian imunisasi dasar lengkap, 86,92% kader berperan aktif dalam pemberian imunisasi dasar lengkap dan 91,59% keluarga mendukung dalam pemberian imunisasi dasar lengkap. Uji Chi Square menunjukkan terdapat hubungan yang signifikan antara peran kader dan dukungan keluarga terhadap kepatuhan ibu dalam pemberian imunisasi dasar lengkap di Puskesmas Nosarara. Saran Perlu adanya upaya peningkatan kapasitas kader posyandu dan sosialisasi program imunisasi pada masyarakat.

ABSTRACT

Saputri, Ajeng Paramita. 2025. The relationship between the role of posyandu cadres and family support on maternal compliance in providing complete basic immunization at the Nosarara Community Health Center, Palu City

Immunization is a means of ensuring children's health, and children's health is a child's basic right that cannot be reduced, so compliance with the immunization schedule is an important factor. Based on data at the Nosarara Community Health Center, Palu City, the achievement of basic immunization for babies is one of the lowest with an achievement of 78.9% in 2023. The aim of this research was to determine the relationship between the role of posyandu cadres and family support on maternal compliance in providing complete basic immunization. The type of research used is descriptive analytic with a cross sectional approach. This research was conducted at a posyandu in the working area of the Nosarara Health Center, Palu City. The population in this study were mothers of toddlers who were given complete basic immunization. The sample for this study was 107 people and was taken using proportional random sampling. Data were analyzed univariately and bivariately with the Chi Square test. The results showed that 77.57% of mothers complied with providing complete basic immunization, 86.92% of cadres played an active role in providing complete basic immunization and 91.59% of families supported providing complete basic immunization. The Chi Square test shows that there is a significant relationship between the role of cadres and family support on maternal compliance in providing complete basic immunization at the Nosarara Community Health Center. Suggestions: Efforts to increase the capacity of posyandu cadres and socialize the immunization program to the community are needed.
