Integrated Service Post (POSYANDU) is one form of Community-Based Health Efforts (UKBM) the frequency of visits to Posyandu Ideally once a month Data from the Blitar Regency Health Office in 2023 showed that there were still 54% of toddlers who wanted to actively visit Posyandu until the age of 5 years.

Based on a preliminary survey conducted at one of the Cempaka Talun Posyandu, there were 40 toddlers in the Cempaka Posyandu area and only around 20 toddlers (50%) each month. This study aims to analyze the influence of husband's support on the mother's interest in visiting Posyandu

The design uses a quantitative approach, "The results of the statistical test showed a p value of 0.426 which is greater than alpha (0.05) so that H0 failed to be rejected. In conclusion, there is no significant influence between husband's support on the mother's interest in visiting Posyandu. Someone who has high husband's support is 1.5 times more likely to visit Posyandu, compared to respondents who have low husband's support

Keywords: Mother's interest in Posyandu
