Data dari dinas Kesehatan Jawa Timur tahun 2019 pasien stroke berjumlah 14.591 mengalami peningkatan dibandingkan Kota Semarang berjumlah 4.516 sedangkan pasien stroke di Rumah Sakit Bhayangkara pada tahun 2020-2022 berjumlah 12.463. Pada pasien stroke, membutuhkan peran petugas Kesehatan dan dukungan keluarga berperan sangat penting untuk membantu dalam proses penyembuhan dan rehabilitasi pasien yang sering kali membutuhkan waktu yang lama dan membutuhkan dukungan penuh keluarga. Tujuan penelitian ini untuk mengetahui fenomena dukungan keluarga pada pasien stroke. Tujuan penelitian untuk mengetahui hubungan dukungan keluarga dan peran petugas kesehatan dengan Awareness pencegahan stroke berulang di RS Bhayangkara Kota Kediri.

Desain penelitian ini adalah *penelitian korelasional* dengan pendekatan *cross sectional*. Responden diambil dengan teknik *Accidental Sampling* yang memenuhi kriteria inklusi dan eksklusi dengan sampel sebanyak 30 orang. Variabel independen adalah Dukungan Keluarga dan peran petugas kesehatan sedangkan variabel dependen Awareness Stroke Yang Menjalani Perawatan Di rumah sakit Bhayangkara. Teknik pengambilan data dengan cara wawancara mendalam dan dikerjakan analisis masalah.

Hasil penelitian diketahui bahwa Dukungan Keluarga Pada Pasien Stroke Yang Menjalani Perawatan Di Rumah Sakit Bhayangkara Kota Kediri diketahui bahwa setengah responden sebanyak 13 (44%) responden dalam kategori Kurang. Peran Petugas Kesehatan Pada Pasien Stroke Di Rumah Sakit Bhayangkara Kota Kediri diketahui bahwa setengah responden sebanyak 13 (43%) responden dalam kategori Cukup. Awareness Stroke Di Rumah Sakit Bhayangkara Kota Kediri diketahui bahwa setengah responden sebanyak 14 (47%) responden dalam kategori Kurang.

Hasil analisa data menunjukkan bahwa tingkat signifikansi $0,000 < \alpha = 0,05$ sehingga H_0 ditolak dan H_1 diterima dengan demikian ada hubungan Peran Petugas kesehatan Dengan Awareness Stroke Di Rumah Sakit Bhayangkara Kota Kediri. Hasil analisa data menunjukkan bahwa tingkat signifikansi $0,010 < \alpha = 0,05$ sehingga H_0 ditolak dan H_1 diterima dengan demikian ada hubungan Dukungan Keluarga Dengan Awareness Stroke Di Rumah Sakit Bhayangkara Kota Kediri.

Dukungan yang diberikan keluarga berupa dukungan informasional, dukungan emosional, dukungan instrumental dan dukungan penghargaan, tanpa ada dukungan keluarga dan peran petugas Kesehatan maka perawatan pasien stroke tidak dapat dilakukan sesuai jadwal.

Kata Kunci : Dukungan Keluarga, Peran Petugas kesehatan, Awareness Stroke.

ABSTRACT

STROKE AWARENESS REVIEWED FROM FAMILY SUPPORT AND THE ROLE OF HEALTH WORKERS AT BHAYANGKARA HOSPITAL KEDIRI CITY

Data from the East Java Health Service in 2019 numbered 14,591 stroke patients, an increase compared to the city of Semarang, which was 4,516, while stroke patients at Bhayangkara Hospital in 2020-2022 numbered 12,463. In stroke patients, the role of health workers and family support plays a very important role in assisting in the patient's healing and rehabilitation process which often takes a long time and requires full family support. The aim of this research is to determine the phenomenon of family support in stroke patients. The aim of the research was to determine the relationship between family support and the role of health workers with awareness of recurrent stroke prevention at Bhayangkara Hospital, Kediri City.

The design of this research is correlational research with a cross sectional approach. Respondents were taken using the Accidental Sampling technique who met the inclusion and exclusion criteria with a sample of 30 people. The independent variables are family support and the role of health workers, while the dependent variable is awareness of strokes undergoing treatment at Bhayangkara hospital. The data collection technique is by means of in-depth interviews and problem analysis is carried out.

The research results showed that family support for stroke patients undergoing treatment at Bhayangkara Hospital, Kediri City, showed that half of the respondents, 13 (44%) of the respondents, were in the Less category. The role of health workers in stroke patients at Bhayangkara Hospital, Kediri City, it is known that half of the respondents, 13 (43%) of respondents, were in the Sufficient category. Stroke Awareness At Bhayangkara Hospital, Kediri City, it was discovered that half of the respondents, 14 (47%) of the respondents, were in the Less category.

The results of data analysis show that the significance level is $0.000 < \alpha = 0.05$ so that H_0 is rejected and H_1 is accepted, thus there is a relationship between the role of health workers and stroke awareness at Bhayangkara Hospital, Kediri City. The results of data analysis show that the significance level is $0.010 < \alpha = 0.05$ so that H_0 is rejected and H_1 is accepted, thus there is a relationship between family support and stroke awareness at Bhayangkara Hospital, Kediri City.

The support provided by the family is in the form of informational support, emotional support, instrumental support and appreciation support. Without family support and the role of health workers, treatment of stroke patients cannot be carried out according to schedule.

Keywords: Family Support, Role of Health Workers, Stroke Awareness.
